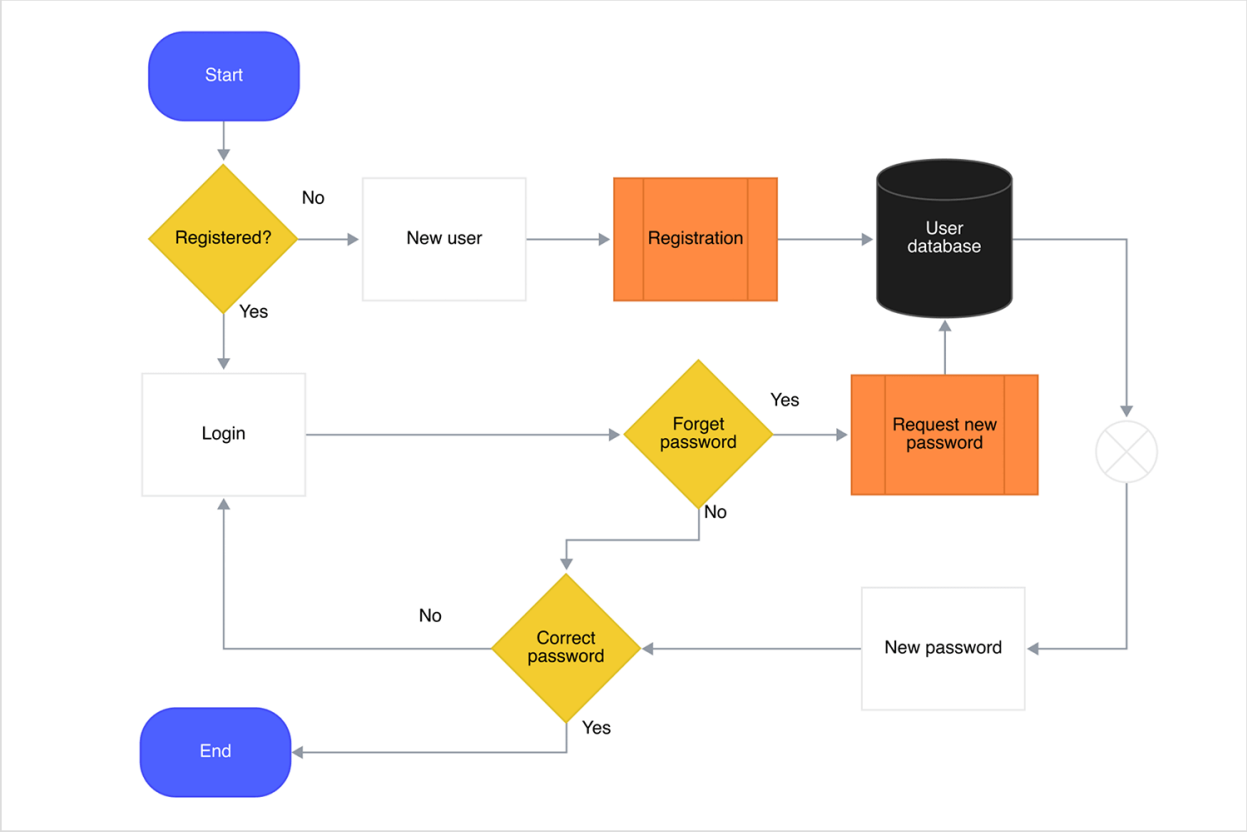
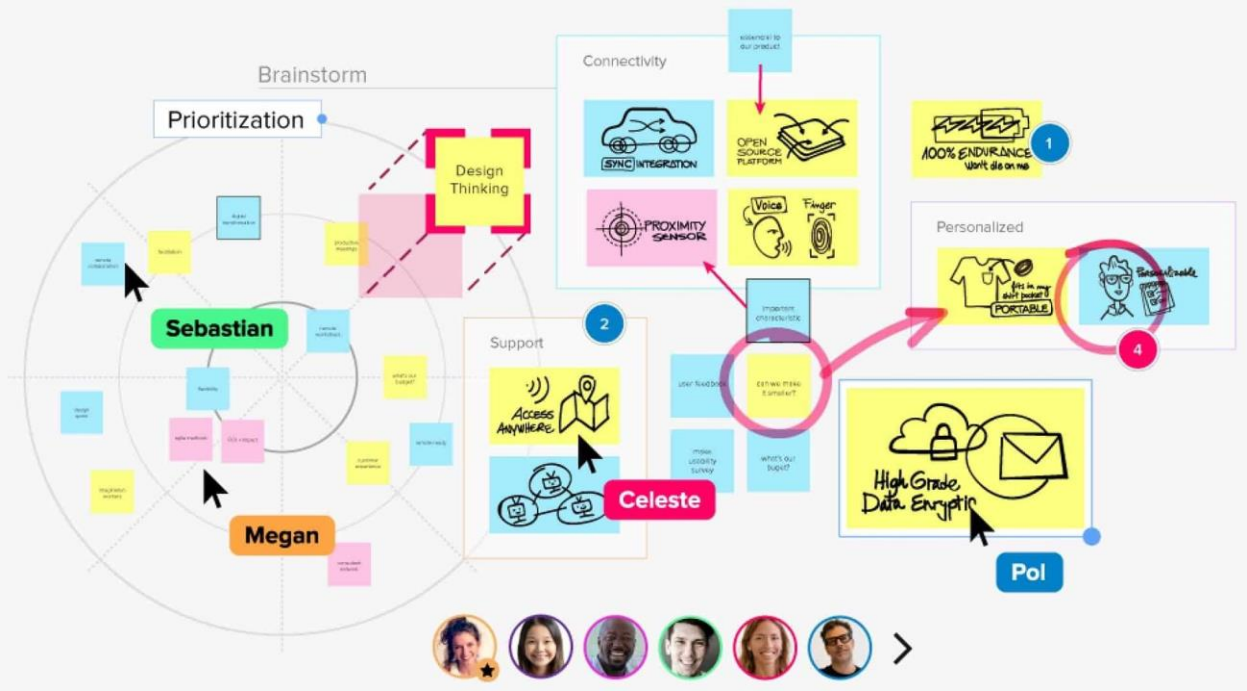
⍰ Productivity, AI & UX Workflow Support





Purpose of Productivity, AI & UX Workflow Support

Great UX outcomes depend not only on design skills, but on **how efficiently teams work**, **how clearly they communicate**, and **how intelligently they use AI**.

At **ENGLORAY Tech Group**, this resource ensures:

- Clear and repeatable UX workflows
- Faster execution with fewer errors
- Better collaboration with developers & stakeholders
- Smart AI usage to enhance (not replace) UX thinking

This resource focuses on **speed, clarity, consistency, and scalability** in UX delivery.

1. Task, Sprint & Project Management

Jira / ClickUp

Used to manage UX tasks within agile or milestone-based projects.

How UX Designers Use These Tools

- Track UX tasks (research, wireframes, testing)
- Plan sprints and timelines
- Sync with developers and product teams
- Update progress transparently

Why This Matters

- No missed tasks or deadlines
- Clear ownership and accountability
- Smooth handoff between design & development

Outcome: UX work stays aligned with product goals and timelines.

2. UX Documentation & Knowledge Management

Notion

Notion acts as a **central UX knowledge hub**.

What Is Documented

- UX briefs & problem statements
- User personas & journey maps
- Research insights & test results
- Design decisions & rationale
- Design system documentation

Why ENGLORAY Uses Notion

- Single source of truth
- Easy onboarding for new designers
- Reduces repeated questions and rework

Outcome: Decisions are traceable and teams stay aligned.

3. Communication, Reviews & Feedback

Loom

Used for **async communication and UX explanations**.

Use Cases

- Explaining user flows and prototypes
- Sharing design rationale
- Giving review feedback
- Client walkthroughs

Why This Matters

- Faster than long meetings
- Clearer than text messages
- Reduces misunderstandings

Outcome: Better clarity with less back-and-forth.

4. AI Support for UX Designers (Smart & Ethical Use)

AI at ENGLORAY is used to **assist UX thinking and productivity**, not to replace human judgment.

ChatGPT

Used For

- UX copywriting (microcopy, onboarding text)
- Generating research questions
- Explaining UX concepts
- Drafting documentation

Benefit

- Saves time on repetitive thinking
- Improves clarity and structure

Figma AI

Used For

- Auto-layout suggestions
- Content placeholders
- Faster component generation

Why It Helps

- Speeds up UI execution
- Supports rapid iteration

Important Rule at ENGLORAY
AI outputs are **inputs and suggestions only**.
Final UX decisions are always **human-led and user-tested**.

5. Standard UX Workflow System

ENGLORAY follows a **clear, repeatable UX workflow**:

1. Requirement & problem definition
2. Research & insights
3. Wireframing & flows
4. UI design & prototyping
5. Usability testing
6. Iteration & refinement
7. Developer handoff
8. Post-launch feedback

Why This Works

- Reduces chaos
- Improves predictability
- Ensures UX quality at every stage

6. File Management, Version Control & Safety

Professional UX work requires **organized and secure assets**.

Practices Followed

- Cloud-based design files
- Version history & naming standards

- Controlled access permissions

Why ENGLORAY Enforces This

- Prevents data loss
- Enables team collaboration
- Supports long-term product maintenance

7. Time Management & Focus Culture

UX designers are encouraged to work **deeply and thoughtfully**, not rushed.

Support Includes

- Clear priorities
- Realistic timelines
- Reduced unnecessary meetings
- Focus blocks for research & design

Outcome: Higher-quality UX decisions with less burnout.

Final Outcome of Productivity, AI & UX Workflow Support

With this resource, ENGLORAY UI/UX designers can:

✓ Work efficiently across teams
✓ Communicate ideas clearly
✓ Use AI responsibly and effectively
✓ Reduce rework and confusion
✓ Deliver UX solutions on time
✓ Scale design processes smoothly
